AliceLabs LLC

Web Development & Design
Wyoming, USA

Capabilities & Discovery Packet

Who we are, what we build, and the questions we ask before sending you a fixed-price proposal.

1. Who we are

AliceLabs LLC is a Wyoming-registered web development and design company specializing in government, institutional, and commercial projects. We build websites, web applications, content management systems, visual identity systems, and accessibility-compliant digital products for clients across the United States, Canada, Latin America, and Europe.

We are a small, senior-only team. That means no hand-offs to junior developers, no offshore staffing, and no sub-contractors. The person who writes the proposal is the same person who writes the code and answers your calls. Every engagement is led end-to-end by a senior engineer with at least ten years of professional experience in their discipline.

AliceLabs LLC is registered in the State of Wyoming. We provide a W-9, Certificate of Insurance, E-Verify compliance, and three client references on request. We sign fixed-fee contracts by milestone, never hourly, and we honour the milestones we quote or we refund the unused portion. We work in English and Spanish, with formal experience delivering bilingual EN/ES sites for US and Latin American clients.

2. What we build

2.1 Websites and web applications

- Custom WordPress and Drupal sites, multisite networks, and headless CMS implementations (Strapi, Sanity, Contentful).
- Next.js / React single-page applications and server-rendered sites with TypeScript, Prisma, PostgreSQL, and Tailwind CSS.
- Laravel/PHP backends with REST and GraphQL APIs, including OAuth2 and Microsoft Entra ID single sign-on integrations.
- Content migration from legacy CMS, including 301 redirect mapping, URL canonicalization, and SEO preservation.

2.2 Visual identity and design systems

- Logo systems, sub-brand identities, and complete brand guidelines (40+ pages, multilingual).
- Template systems for in-house non-technical staff: flyers, programs, banners, social cards, letterhead, business cards.
- Wayfinding signage systems for downtown districts, transit hubs, and municipal facilities, including ADA-compliant variants.
- Accessible digital document design: WCAG 2.1/2.2 AA PDF, HTML, and EPUB output from a single source.

2.3 Specialist integrations

- Payment processing: Stripe, PayPal, PCI-compliant flows, recurring billing, and donation systems for nonprofit clients.

- GIS and spatial data: PostgreSQL/PostGIS, GDAL, GeoServer, OpenLayers, and OGC WMS/WFS integration for environmental and municipal monitoring platforms.
- AI and automation: chatbots, document extraction, workflow automation, MCP integrations, and trust-card verification systems.
- Identity and access: Microsoft Entra ID (formerly Azure AD) SSO, OAuth2, SAML, RBAC, and audit-trail implementations.

3. How we work

3.1 Engagement model

Every engagement starts with a free 30-minute discovery call. From there we issue a fixed-fee proposal within 48 hours, broken down by milestone. We do not bid hourly and we do not invoice for time we did not spend on your deliverables. Each milestone has a defined acceptance criterion, a defined deliverable, and a defined payment. You see exactly what you are paying for before you pay for it.

3.2 Project management and communication

We use a shared Trello or Notion board for every project, updated at the end of each working day. You receive a written status update every Friday, and we hold a 30-minute sprint review every two weeks over Zoom. We respond to email and Slack within one business day. There is no project manager buffer between you and the engineer doing the work — you talk directly to the person writing your code.

3.3 Accessibility and compliance

We deliver every public-facing site to WCAG 2.1 AA or WCAG 2.2 AA, verified with automated tools (axe-core, Lighthouse, WAVE) and a manual screen-reader pass using NVDA and VoiceOver. We document our accessibility testing in the acceptance report. For US federal clients, we can document Section 508 conformance. For Canadian clients, we can document AODA and ACA conformance.

3.4 Hosting, support, and warranty

We do not own hosting. We deploy to your infrastructure of choice (AWS, Google Cloud, Azure, Vultr, Hostinger, Netlify, Vercel) and hand over all credentials and access logs at acceptance. We offer optional monthly maintenance contracts starting at $500/month for security patches, dependency updates, and bug fixes. Every contract includes a 90-day post-launch warranty during which we fix any defect attributed to our own code at no additional cost.

4. Project discovery — questions for you

To send you a fixed-fee proposal that we can actually honour, we need to understand the project before we quote it. The questions below are the same ones we ask every client at the start of an engagement. Answer what you can in writing, and we will follow up by email or in a 30-minute call on anything that needs more context.

4.1 Business context

- What is the one-sentence goal of this project? (e.g. "reduce support calls by 30%", "launch a new paid product line", "modernize our brand for a 2027 rebrand")
- Who is the primary user of what we will build, and what is the single most important task they need to complete on their first visit?
- What does success look like six months after launch? Be specific: numbers, behaviours, or milestones — not adjectives.
- Who are your top three competitors or peer organizations, and what specifically do you want to do better than each one?

4.2 Scope and deliverables

- What pages, sections, or features must be present at launch? A sitemap, even rough, is enough to start.
- Are there third-party systems we must integrate with (CRM, ERP, payment, identity, GIS, marketing automation, learning management)? Please list each one with the vendor name and whether you have API access already.
- Do you have an existing brand book, logo, color palette, typography, or content style guide we must follow? If yes, please share.
- Do you have existing content (copy, photography, video) that we are responsible for migrating, or will we be responsible for creating it? Content production is a separate scope from design and development.
- What languages must the site support at launch, and which languages might be added within the first 12 months?

4.3 Technical and compliance

- Do you have an existing hosting provider, or should we propose one? If existing, please share the platform (AWS, Azure, GCP, Vercel, Netlify, Vultr, etc.) and the instance size you currently run.
- What CMS (if any) does your team use today, and how comfortable is your staff with editing content without developer support?
- Are there regulatory compliance requirements we must document? (WCAG 2.1/2.2 AA, Section 508, AODA, HIPAA, PCI-DSS, GDPR, CCPA, FERPA, ADA, etc.)
- Do you require single sign-on (Microsoft Entra ID, Okta, Google Workspace) or any role-based access control matrix?
- Are there data residency requirements (data must physically reside in a specific country or region)?

4.4 Timeline, budget, and procurement

- When do you need this live in production? Please give us the actual date, not a wish. We will tell you honestly whether it is achievable.
- What is your budget range? We will tell you honestly what we can deliver inside that range, and what we cannot. We never pad a quote to fit a budget.
- Is this a fixed-fee contract or a time-and-materials engagement? We strongly prefer fixed-fee because it puts the delivery risk on us, not on you.
- Are you a government, institutional, or commercial buyer? Procurement rules differ between the three, and they affect how we structure the contract.
- Do you have a standard contract template you want us to use, or should we send ours? We have a Wyoming-governing master services agreement we can share.

4.5 Next step

Reply with as much as you can in writing. We will issue a fixed-fee proposal within 48 hours of receiving your answers. If you prefer a 30-minute call instead, send us two or three times that work for you and we will confirm one by return email. There is no cost for either step.

5. Selected case studies

Below is a representative selection of past and current work. Detailed portfolio, client references, and live URLs are shared on request under NDA where applicable.

WebGIS & spatial data platforms

Design and development of integrated spatial-data repositories with PostGIS, GDAL, OpenLayers, and S3-compatible storage, including OGC WMS/WFS consumption, metadata catalogues (ISO 19115), RBAC, SSO Microsoft Entra ID, and public map dashboards. Bilingual (EN/ES) implementations and audit-trail logging.

Compliance screening SaaS

Stripe-powered compliance screening application for AML, sanctions, and PEP checks, with batch upload, certified PDF reports, API documentation, and a Stripe checkout flow. React + TypeScript + Tailwind frontend, Node.js serverless backend.

Municipal website consolidations

Migration and consolidation of multiple departmental sites into a unified WordPress Multisite or Drupal installation, including 301 redirect mapping, content audit, WCAG 2.1 AA conformance, and staff training for non-technical content editors.

x402 payment protocol & trust cards

Universal Trust Adapter (ATC/1.0): Ed25519-signed trust cards, RFC 8785 JCS canonicalization, ten verification controls, and a live x402 endpoint selling per-call trust verification in USDC on Base. Open-source at github.com/alicelabs-llc/universal-trust-adapter.

Bilingual education ecosystem

WordPress Multisite network of 43 sites (1 network site + 3 regional hubs + 41 school microsites) with role-based editorial workflows, content syndication, and integrations to SchoolMint, HubSpot, and Greenhouse. WCAG 2.2 AA, EN/ES.

6. Company snapshot

Legal name	AliceLabs LLC
Entity type	Limited Liability Company (LLC)
State of registration	Wyoming, USA
Year founded	2024
Principal contact	Edison Flores Guerra, Founder
Email	contacto@alicelabs.site
Website	alicelabs.site
Languages	English, Spanish
Compliance	W-9, E-Verify, COI on request
Contract type	Fixed-fee by milestone (preferred)
References	Three on request, with contact email + phone

This document is provided for procurement evaluation purposes. It is not a contract, proposal, or offer to perform services. Any fixed-fee proposal we issue is delivered separately in writing and is valid for 30 days from the date of issue.
